GREEN GATOR

Total Overseeding Fertility

GOT SEED?

Granular Fertilizer Prices Through the Roof?

This year get your TOTAL overseeding fertility from Geoponics Green Gator Fertility Package. You can literally save THOUSANDS of dollars while your turf receives complete fertility management. The Green Gator Package packs the growth punch you are looking for while maintaining water management all in one economical package. So why waste money on fertilizers that are just going to leech right through the soil with the first rain. Try the truly organic fertility coupled with the earth friendly moisture management of The Green Gator Overseeding Fertility Package. You will be AMAZED!

Carbotem's Organic fertility is the backbone of the Green Gator overseeding program. It packs a powerful punch with its 6-2-5 analysis. It boasts a complete analysis backed by proteins bursting with amino acids and carbohydrates to facilitate nitrogen fixing bacteria and beneficial enzymes. Once in the soil it promotes sustainable growth and vivid color to save you money and to save our environment.

HydroGro facilitates the basic need of soluble carbon in the soil while adding needed potassium at the same time. HydroGro increases nutrient uptake, drought tolerance and seed germination. HydroGro increases the availability of nutrients that are already in your soil and will naturally aerate the soil to sustain a healthy profile. HydroGro assists with optimizing the pH of the soil and will flush high levels of salts out of the root zone. A little HydroGro will go a LONG WAY.

Penterra FWS is an economical yet highly effective soil penetrant to assist with the movement of water and dissolved oxygen into the root zone and pore spaces of the profile. It greatly assists with reducing compaction by increasing ionic charges so that soil particles literally begin to repel away from one another, thus augmenting soil porosity. It is a must for water management during overseeding.

Advantages:

- **Complete Fertility**
- **Organic Sustainable Growth**
- **Economical**
- **Environmentally Friendly**
- **Increased Nutrient Efficiency**
- **Increased Seed Germination**
